

# Proximity Shields for KeyAdvantage Key Control System

## Block the signal from a smart key

Durable Proximity Shields from Supra contain the signal from keyless-entry devices. The shields enable you to store the keys safely at the vehicle in your KeyAdvantage KeyBox without releasing an “open” signal to unlock the car.

The square-shaped Standard Proximity Shield holds most keyless-entry keys, while long, narrow keys may be placed in the Tapered Proximity Shield. Each Shield is attached to the KeyAdvantage KeyTag and easily fits in the KeyAdvantage KeyBox. Constructed of lightweight aluminum, the shield encases the keyless-entry key so that “open” signals cannot be transmitted to the vehicle.

### Features:

- Two models available for different key sizes
- Blocks the vehicle entry signal
- Lightweight aluminum
- Simple operation
- Removable shield is compatible with all KeyAdvantage KeyBoxes

### Ordering information:

Model	Part Number	Interior Dimensions
Short	002147-01	2.99" x 1.94" x 0.81"
Tall	002148-02	3.44" x 1.64" x 0.68"

Smart key technology and signal strength can vary from year to year. Always test the shield with your smart keys before use.

### Operations:

Visit the KeyAdvantage website to see video-clips of the Proximity Shields in the key container:
