

TRACcess® System: Rapid Entry

10 Reasons to Upgrade your Lockbox System

1. Eliminate the risk of lost or stolen keys — Losing a lockbox key potentially exposes your department and municipality to virtually unlimited liability. Reduce your risk and your liability by employing TRACcess. Its keys are useless if lost or stolen.
2. Build confidence in your lockbox program — TRACcess generates an electronic record each time a lockbox is opened. Building owners know that you have an audit trail of exactly who accessed their lockbox and when, making your program transparent and accountable.
3. Eliminate uncertainty about whether a lockbox was used to illegally access a building. You can retrieve an up-to-date audit trail from any TRACcess lockbox in your municipality to verify the lockbox has not been opened recently.
4. View entry reports via web — TRACcess keys upload a record of the lockboxes that they have opened to an online database that is hosted by Supra. Secure web reports tell you the date and building location for every lockbox opening.
5. Low costs — TRACcess is surprisingly affordable for all parties concerned.
6. Contain costs and limit manpower requirements. Upgrading the security and safety of your lockbox program can appear to be time intensive, but it does not have to be. Contact us to learn more.
7. The only electronic lockbox UL certified for attack resistance. Underwriter Laboratories, an independent product safety organization, has certified that TRACcess lockboxes are very difficult to break into. Few lockboxes are UL certified as anti-theft devices.
8. Experience matters — Supra is the largest worldwide supplier of lockbox systems. In business since 1955, we've sold over 6 million lockboxes.
9. *Get out of the business of managing lockboxes. You can authorize trusted business partners, such as fire department approved locksmiths or security companies, to manage the lockboxes. Local business partners can be trusted to supply lockbox products and services because TRACcess records every time they open a lockbox. Traditional lockboxes with mechanical keys can't do this. And, once you have partners, you will be surprised at how little time it takes to administer the TRACcess system.
10. *Reduce frustration with out-of-date building keys! With TRACcess you can trust local business partners to audit and organize each access key with a specific label so fire department personnel can quickly enter specific doors.

* Contact us for more information on how other fire departments have refocused their resources on fire prevention by upgrading to TRACcess and partnering with local businesses.
